

SLITHER

DRIFT SCOOTER

What is the Slither? The Slither drift scooter is the latest invention from Pulse, the leaders in outdoor rolling fun. This one-of-a-kind, three-wheeled scooter features two large front wheels offset with a single rear wheel housed in a pivot-mounted swivel truck. This rudder-like rear wheel gives you the freedom to drift in and out of turns, zip around corners, execute lightning-quick 180° turns, and pull off other tricks and maneuvers that are simply not possible on any other scooter or wheeled good. Adjust the tension to the rear wheel to meet any skill level. You can also ride the Slither facing forward or standing to one side, opening up even more trick possibilities and making it that much harder to put away. The Slither is emblazoned with vibrant new graphics in two dynamic colorways: Electric Blue “Skullwing” and Toxic Green “Von Scroll.”

SLITHER DRIFT SCOOTER

Handlebars - Slightly curved handlebars help maintain control and performance.

Grips - Dual-density control grips absorb vibrations.

Deck - The ultra-stiff deck's contoured shape and molded traction pattern to give feet grip and leverage. In-molded graphics on the deck will not scratch or wear off with use.

Folding Mechanism - Quick release folding mechanism allows you to store your Slither quickly and easily.

Swivel Truck - The lightweight aluminum rear swivel truck gives the Slither its unique motion, and can be loosened or tightened to meet any rider's Slithering style.

Wheels - High-performance urethane wheels (oversized 84A in front, street racing 88A in rear) supply grippy traction for turning, gliding and cornering.

Frame - The frame is composed of high tensile steel, and includes a sub-frame grind bar and lapper to open up trick possibilities.

Finish - High-grade powder coat finish is both durable and easy to clean. Graphic pattern covers the downtube and front axle truck.
